GroupFund Bank

Batch Code	: B010101
Start Date	: May 12, 2011
End Date	: May 19, 2011
Name of the Coordinator	: Mr. Pham Tuan
Name of Developers	: Ngo Xuan Binh Phi Trung Duc
Date of Submission	: May 26, 2011

CERTIFICATE

This is to certify that this report, titled *GroupFund Bank*, embodies the original work done by *Ngo Xuan Binh* and *Phi Trung Duc* in partial fulfillment of their course requirement at NIIT.

Coordinator : *Mr. Pham Tuan*

ACKNOWLEDGEMENT

We have benefited a lot from the feedback and suggestions given to us by Mr. Pham Tuan and other faculty members.

SYSTEM ANALYSIS

System Summary: GroupFund Bank queue system is an Internet-based application. It will generate a coupon number for each customer visiting the bank. The different customer service desks will cater to the different needs of the customers.

There are three types of users:

- *Administrator:* Will be responsible for maintaining master data
- *Banking Officers:* Will be responsible for interacting with the customers, and increase ticket number after a customer is served.
- *Customers:* Will be responsible to obtain a new ticket number

All users have themselves username and password. They can retrieve lost password by providing certain authenticated information such as their date of birth.
